(I) is selected by using canonical CDR structure types of non-human antibody in comparison to germline canonical CDR structure types of human antibody in comparison to CC germline canonical CDR structure types of human antibody in comparison to the description of the method is useful for making a converting a subject antibody sequence of any subject species to a less converting a subject antibody sequence of any subject species to a less cimmunogenic form suitable for use in an object species. The method is creation befor identifying suitable human framework sequences to support comp-human CDR regions and to provide humanised antibodies that retain high antigen binding with low immunogenicity in humans, without the need for determining critically important amino acid residues in the framework, and without the need for multiple iteration and construction to obtain the humanised antibodies with suitable therapeutic properties. The antibody can be high affinity and low immunogenicity without need for comparing framework sequences between non-human and human antibodies. This sequence creation of humanised antibodies and antibodies.
                                                                                                                                                                                                                                                                                      Query Match

(I) is selected by using canonical CDR structure types of non-human antibody in comparison to germline canonical CDR structure types of human antibody in comparison to germline canonical CDR structure types of human antibodies as the basis for selection, for humanisation. The method is useful for making a humanised antibody or a converted antibody. The method is applicable for converting a subject antibody sequence of any subject species to a less immunogenic form suitable for use in an object species. The method is reliable for identifying suitable human framework sequences to support non-human CDR regions and to provide humanised antibodies that retain high antigen binding with low immunogenicity in humans, without the need for direct comparison of framework sequences, without the need for
                                                                                                                                                                                                                                                                                               determining critically important amino acid residues in the framework, and without the need for multiple iteration and construction to obtain humanised antibodies with suitable therapeutic properties. The antibody has high affinity and low immunogenicity without need for comparing framework sequences between non-human and human antibodies. This sequence represents a human light chain variable region gene segment used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Making humanized antibody for converting antibody, by making chimeric antibodies containing complementarity determining region from non-human antibody and appropriate framework sequences of human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; light chain variable region; VK; humanised antibody;
chimeric antibody; complementarity determining region; CDR;
                                                                                                                                                                                                                                          Sequence 95 AA;
                                                                                                                                                                                                                                                                                  creation of humanised antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a method of making a humanised antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 1; Fig 2; 31pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2003-492151/46.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         12-JUL-2001; 2001US-0305111P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 12-JUL-2002; 2002US-00194975.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           27-FEB-2003.

The tumour inhibition process comprises selecting an animal in need of treatment for a tumour, providing a monoclonal antibody comprising a heavy chain amino acid, where the antibody consists of any one of 10 fully defined sequences of 117-123 amino acids given in the specification, and where the monoclonal antibody binds MUC18, and contacting the tumour with the antibody resulting in inhibited proliferation of the cells. The monoclonal antibody has cytostatic and can be used in the production of a vaccine. The monoclonal antibodies against the MUC18 antigen are useful for diagnosing and treating tumours, inhibiting tumour growth (e.g. melanoma, lung tumour or increasing survival of an animal having a metastatic tumour. This sequence represents an anti-MUC18 antibody light chain, variable region,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Use of monoclonal antibodies against MUC18 antigen, for diagnosing and treating tumors, inhibiting tumor growth, inhibiting cell invasion associated with melanoma, or increasing survival of an animal having a metastatic tumor.

The tumour inhibiting variety used for inhibiting cc selecting an animal in need of treatment for a tumour, providing a cc monoclonal antibody comprising a heavy chain amino acid, where the cantibody consists of any one of 10 fully defined sequences of 117-123 cc amino acids given in the specification, and where the monoclonal antibody binds MUC18, and contacting the tumour with the antibody resulting in cc inhibited proliferation of the cells. The monoclonal antibody has ccytostatic and can be used in the production of a vaccine. The monoclonal antibodies against the MUC18 antigen are useful for diagnosing and ct treating tumours, inhibiting tumour growth (e.g. melanoma, lung tumour or increasing survival of an animal having a metastatic tumour. This sequence represents an anti-MUC18 antibody light chain, variable region, cr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position(s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody, especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody variable region sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             01-MAR-2002; 2002US-0360843P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                446
```

The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position(s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions;

positions.

Example 16; Fig 40b; 135pp; English

The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody variable position(s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody especially the stability, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody variable region sequence used to illustrate the invention.

The method is useful for optimizing the physico-chemical properties of an antibody, especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody variable region sequence used to illustrate the invention.

                                                                                                                                  physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position(s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody, especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position(s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody, especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody variable region sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                             Sequence 95
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens

The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; structure; selecting at least one amino acid to be considered at the variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody, especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody way variable region sequence used to illustrate the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention comprises a method for inhibiting cell proliferation associated with expression of MUC18 tumour antigen. The method involves administering anti-MUC18 monoclonal antibody. The method of the invention is useful for inhibiting cell (e.g. melanoma or tumour cell) proliferation associated with the expression of MUC18 tumour antigen, the method is preferably useful for inhibiting tumour metastasis. The method is useful for inhibiting tumour metastasis. The method is useful for inhibiting tumour metastasis tumours, carcinomas, cancer and other malignancies. The present amino acid sequence is used in an alignment with an MUC18 tumour antigen-specific monoclonal antibody of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention comprises a method for inhibiting cell proliferation associated with expression of MUC18 tumour antigen. The method involves administering anti-MUC18 monoclonal antibody. The method of the inventior is useful for inhibiting cell (e.g. melanoma or tumour cell) proliferation associated with the expression of MUC18 tumour antigen, the method is preferably useful for inhibiting tumour metastasis. The method is useful for inhibiting tumour metastasis. The method is useful for inhibiting cell proliferation in patients with tumours, carcinomas, cancer and other malignancies. The present amino acid sequence is used in an alignment with an MUC18 tumour antigen-specific monoclonal antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Inhibiting cell proliferation associated with expression of MUC18 tumor antigen, involves incubating and inhibiting cell by administering anti-MUC18 monoclonal antibody.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention comprises a method for inhibiting cell proliferation associated with expression of MUC18 tumour anxigen. The method involves administering anti-MUC18 monoclonal antibody. The method of the invention is useful for inhibiting cell (e.g. melanoma or tumour cell) proliferation associated with the expression of MUC18 tumour antigen, the method is preferably useful for inhibiting tumour metastasis. The method is useful for inhibiting cell proliferation in patients with tumours, carcer and other malignancies. The present amino acid sequence is used in an alignment with an MUC18 tumour antigen-specific monoclonal antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antigen,
MUC18 mo
                                                                                                                                                                                                          Producing a hybrid antibody or hybrid antibody fragment by operatively linking the selected framework sequences to one or more complementarity determining regions of the initial antibody.
                                                                                                                                                                                                                                                                                                                         WPI; 2003-513753/48.

The invention relates to a method of producing a hybrid antibody or hybrid antibody fragment by: (i) providing an initial antibody having specificity for a target; (ii) determining the sequence of a variable region of the initial antibody; (iii) selecting a first component of the variable region consisting of FR1, FR2, FR3 and FR4; (iv) comparing the

SEQ ID NO 31; 77pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC than the first component, the second component selected from the group CC consisting of FR1, FR2, FR3 and FR4; (vii) comparing the sequence of the CC second component to sequences of the CC antibody sequences or antibody fragment sequences from the group CC antibody sequences or antibody fragment sequences from the target species CC; (vii) selecting a sequence from the database which demonstrates a high CC degree of homology to the second component and which is from a different CC antibody than the selected antibody; and (ix) operatively linking the CC selected framework sequences to one or more complementarity determining cregions (CDRs) of the initial antibody to produce a hybrid antibody or hybrid antibody fragment (Claimed). The antibody and CC insignents are useful for therapeutic and diagnostic purposes. The method CC uses entire framework regions from a single antibody variable heavy or corriable light chain to receive the CDRs. This produces antibodies that CC are highly homologous and exhibit reduced immunogenicity while CC maintaining an optimum binding profile. This sequence represents the CC amino acid sequence of an antibody from the Vkappa gene locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequence of the first component to sequencers contained in a reference database of antibody sequences or antibody fragment sequences from a target species; (v) selecting a sequence from an antibody in the database which demonstrates a high degree of homology to the first component; (vi) selecting a second component of the variable region which is different
                                                                   Producing a hybrid antibody or hybrid antibody fragment linking the selected framework sequences to one or more determining regions of the initial antibody.

                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the light chain variable region of human antibody CC L16. This is one of repertoire of human kappa light chain sequences CC AD007310-AD007349 screened for putative catalytic triads. Several genes CC encoding such light chains AD007202-AD007309 were cloned for use in CC encoding such light chain about the invention. These comprise a CC human antibody light chain operably joined to a heterologous antibody heavy chain. The light chain has a serine protease dyad and endopeptidase CC activity, and the heavy chain has a predetermined specificity for a catalytic activity to hydrolyse polypeptides and the construction of a repertoire of protease with cc ustomised protein substrate specificities of proteases with cc ustomised protein substrate specificities of potentially unlimited number and thus makes possible the effective treatment and/or prevention of an identified protein. The invention also provides muchain the catalytic antibodies (which can be used for gene therapy), host cells, transgenic mon-human animals, and methods of cleaving a CC polypeptide. It also provides a library of recombinant catalytic polypeptides with altered enzymatic activity of the recombinant catalytic consumers.

CC chain. A serine protease triad was not identified in the present cc activity of the procession of the heavy chain.
                                                                                                                                                                                                              S

Novel recombinant catalytic polypeptide useful for cleaving target proteins or for treating or preventing cancers, comprises a human antibody light chain operably joined to a heterologous antibody heavy

Disclosure; Fig 3; 92pp; English

CC recombinant catalytic polypeptides of the invention. These comprise a comprise, and the heavy chain has a serine protease dyad and endopeptidase comprise, and the heavy chain has a predetermined specificity for a comprise the catalytic activity to hydrolyse polypeptides and the comprise the catalytic activity to hydrolyse polypeptides and the construction of a repertoire of proteases with construction attributable to the presence or overexpression comprise and condition attributable to the presence or overexpression company medical condition attributable to the presence or overexpression company medical condition attributable to the presence or overexpression company medical condition attributable to the presence or overexpression company medical condition attributable to the presence or overexpression company medical condition attributable to the presence or overexpression company medical condition attributable to the presence or overexpression company medical protein. The invention also provides mucleic acids considered the catalytic antibodies (which can be used for gene therapy), host cells, transgenic non-human animals, and methods of cleaving a complementary of recombinant catalytic polypeptides by the enzymatic activity of the recombinant catalytic polypeptides by the present of the present of the heavy chain a serior protein the complementarity determining region of the heavy chain a serior protein complementarity determining region of the heavy chain and catalytic polypeptides by the present catalytic complementarity determining region of the heavy chain and catalytic polypeptides by the present catalytic complementarity determining region of the heavy chain and catalytic polypeptides with altering the pres The present sequence is the light chain variable region of human antibody L2. This is one of repertoire of human kappa light chain sequences ADO07310-ADO07349 screened for putative catalytic triads. Several genes encoding such light chains ADO07282-ADO07309 were cloned for use in mutating at least one complementarity determining chain. A serine protease triad was not identified was not identified in the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                  The present invention relates to an antibody comprising a variable light chain region or a variable heavy chain region. The antibody and methods are useful for treating a disorder associated with an abnormally high IgE level, e.g. asthma, altergic rhinitis, eczema, urticaria, atopic dermatitis, or a food allergy. The present sequence represents a FRL which demonstrates improved affinity. This sequence is present in the library of variants in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New high affinity human monoclonal antibodies, particularly those directed against isotypic determinants of immunoglobulin E, useful for asthma, allergic rhinitis, eczema, urticaria, atopic dermatitis, or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antibody; variable light chain; variable heavy chain; Antiallergic; Dermatological; Immunosuppressive; IgE; asthma; allergic rhinitis; eczema; urticaria; atopic dermatitis; food allergy; CDR; FRL.

                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a method for generating a humanised high affinity antibody from an antibody of interest. The method involves selecting a suitable human template as the framework for the H (heavy) and L (light) chain variable (V) domains of the high affinity antibody to be made. The method is useful for generating high affinity antibodies useful in diagnostics, prophylaxis and treatment of diseases. The present sequence is murine anti-human IgE antibody (TES-C21) Vk (kappa chain

                            New high affinity human monoclonal antibodies, particularly those directed against isotypic determinants of immunoglobulin E, useful asthma, allergic rhinitis, eczema, urticaria, atopic dermatitis, food allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibody; variable light chain; variable heavy chain; Antiallergic; Dermatological; Immunosuppressive; IgE; asthma; allergic rhinitis; eczema; urticaria; atopic dermatitis; food allergy; CDR; FRL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to an antibody comprising a variable light chain region or a variable heavy chain region. The antibody and methods are useful for treating a disorder associated with an abnormally high IgE level, e.g. asthma, allergic rhinitis, eczema, urticaria, atopic dermatitis, or a food allergy. The present sequence represents a FRL which demonstrates improved affinity. This sequence is present in the library of variants in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New high affinity human monoclonal antibodies, particularly those directed against isotypic determinants of immunoglobulin E, useful for asthma, allergic rhinitis, eczema, urticaria, atopic dermatitis, or a food allergy.

                                                    The invention relates to a method for generating a humanised high affinity antibody from an antibody of interest. The method involves selecting a suitable human template as the framework for the H (heavy) and L (light) chain variable (V) domains of the high affinity antibody to be made. The method is useful for generating high affixity antibodies useful in diagnostics, prophylaxis and transment of diseases. The present sequence is murine anti-human IgE antibody (TES-C21) Vk (Kappa chain variable region) FR (framework region) variant peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mus sp.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to an antibody comprising a variable lig chain region or a variable heavy chain region. The antibody and method are useful for treating a disorder associated with an abnormally high level, e.g. asthma, allergic rhinitis, eczema, urticaria, atopic dermatitis, or a food allergy. The present sequence represents a FRL which demonstrates improved affinity. This sequence is present in the library of variants in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                 Generating a humanized, high affinity antibody from an antibody of interest comprises selecting a suitable human template as the frame for the H and L chain variable domains of the high affinity antiboo

                                                                                                                                                                                                                                                                                                                      The invention relates to a method for generating a humanised high affinity antibody from an antibody of interest. The method involves selecting a suitable human template as the framework for the H (heavy) and L (light) chain variable (V) domains of the high affinity antibody be made. The method is useful for generating high affinity antibodies useful in diagnostics, prophylaxis and treatment of diseases. The prese sequence is murine anti-human IgB antibody (TES-C21) Vk (kappa chain variable region) FR (framework region) variant peptide.

                                                                                           Query Match
                                                                                                                                                                     The invention relates to a method of modulating insulin activity in mammalian cells by administering a peptide that binds the insulin receptor (IR). A composition containing a peptide, optionally expressed from gene therapy vectors, that binds to Site 1 of IR and an insulin agonist are useful for treating diabetes. Also, peptides that are antagonists of the insulin-like growth factor (IGF-1) receptor are useful for treating insulin-like growth factor (IGF)-sensitive tumours (e.g. of prostate and breast) and diabetic retinopathy, while IGF-1 receptor agonists are useful for treating neurological diseases, including stroke and diabetic neuropathy. The peptides are also useful in screening for compounds that bind to IR or IGF-1 receptor, potential therapeutics and research reagents. AAU88034-AAU90957 represent IR and/or IGF-1 receptor-binding peptides and related amino acid sequences of the

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           seq length: 0
